The numbering of claims is not in accordance with 37 CFR 1.126

Misnumbered claims 22-26 have been renumbered 19-23.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1,5,6,7,11,12,13,17,18 and 19 are rejected under 35 U.S.C. 102(a) as being anticipated by Uglow et al.

See figure 10c, for example. The claims do not require the first, second or third regions to be formed in a particular order or be arranged in a particular manner. In the process and structure of Uglow either of the first and second portions of layer 204 is formed by continuing the formation of the layer.

Claims 2-4,8-10,14-16 and 20-23 are rejected under 35 U.S.C. 102(a) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Uglow et al.

In view of the disclosure that the C content of the film is ramped up during deposition (col.7, lines 3-32) the layer would contain portions having the relative doping concentrations recited in the process and product of the reference in part because the claims do not require the first, second or third regions to be

formed in a particular order or be arranged in a particular manner. If the structure of Uglow et al is not encompassed by the claim language it would have been within the scope of one of ordinary skill in the art to arrive at the recited C content profiles through routine experimentation to achieve desired performance of the layer in view of the disclosure that C content changes the dielectric constant of the layer.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Any inquiry of a general nature or relating to the status of this application should be directed to the Group Receptionist whose telephone number is (703) 308-0956. See MPEP 203.08.
